

Kaan Balci

AI Designer & Software Developer

I design AI workflows and build software products that turn ideas into scalable systems. My background combines AI workflow design, chatbot logic, automation, backend systems, responsive web/mobile development and game development.

Profile Snapshot

Computer Programming graduate from Izmir University of Economics with a 3.07 GPA. Active in 50+ projects across AI, backend, automation, web/mobile and game development. Experience includes CBOT AI Designer work on chatbot solutions for banks, municipalities and enterprise clients, plus LLM response quality, prompt and code output evaluation.

50+ Projects	25+ Certificates	2025 CBOT AI Designer	AI Flow Chatbot & automation
--------------	------------------	-----------------------	------------------------------

Core Skills

AI & Automation	Chatbot flow design, n8n-style automation, AI Flow logic, IVR awareness, LLM response evaluation
Software	Python, C#/.NET, JavaScript, PHP, Java, Kotlin, C++, clean application logic
Data & Backend	MySQL, MSSQL, SQLite, Firebase, Google Sheets workflows, dashboard thinking
Games	Unity, Unreal Engine, C#, C++, Blueprints, gameplay logic and OOP principles

Selected Case Studies

Atölye Joyday Official Website

Real business website for a creative workshop studio. Includes service presentation, responsive pages, package-based reservation flow and operational tracking support.

[HTML](#) • [CSS](#) • [JavaScript](#) • [Responsive Design](#) • [Workflow](#)

Atölye Joyday Reservation Workflow

Package selection and reservation journey inspired by product-flow logic. Selected package context is carried into the form experience to reduce friction.

[JavaScript](#) • [Forms](#) • [Google Sheets](#) • [Customer Flow](#)

AI Chatbot Flow Design

Enterprise chatbot flow design experience covering requirement analysis, conversation logic, IVR awareness, fallback thinking and multi-channel user journeys.

[AI Flow](#) • [n8n](#) • [Chatbot Logic](#) • [IVR](#)

Hospital Form App

C# Windows Forms appointment automation system with MSSQL and a complex multi-form desktop application structure.

[C#](#) • [.NET](#) • [Windows Forms](#) • [MSSQL](#)

Drivenfinity

Hyper-casual 3D mobile driving simulation game focused on obstacle avoidance, score loops and reflex-based gameplay.

[Unity](#) • [C#](#) • [3D](#) • [Mobile Game](#)

Experience Highlights

CBOT - AI Designer	Designed AI-powered chatbot solutions and automation flows for banks, municipalities and enterprise clients.
Outlier AI - AI Training Specialist	Evaluating AI-generated responses, prompts, multimodal interactions and code outputs for LLM workflows.
Atölye Joyday - Co-Founder & Web Developer	Built a real business website and reservation workflow for a creative workshop studio.
Punto Organization - Software / Operations	Worked across Python, database, dashboard and event operations responsibilities.

How I Work

1. Understand the goal: clarify user need, business requirement, data source and expected result.
2. Design the logic: map the flow, system structure, edge cases and core interaction path.
3. Build and improve: implement, test, refine and keep the output maintainable for real usage.

Career Direction

I am focused on AI Designer / Software Developer roles where I can design chatbot systems, automate workflows, evaluate LLM quality and build useful software products. I can contribute to AI workflow design, chatbot systems, automation logic, web products, backend tools and software development teams.
